- **safeNmap** – building a Linux tool to map the network of a given IP, scan for ports and vulnerabilities of the network using evasion techniques.  
link - <https://github.com/javajave/safeNmap>
- **siteScan** - building an online collector that scan enemy websites, analyzes as well as extracts hidden data, and crawls to linked websites.  
link - <https://github.com/javajave/siteScan>
- **automatiControl** – building a botnet using Shodan cli, known weaknesses and msfconsole.

## EDUCATION

---

**2021** Cyber Security student – John Bryce college.

**2017-2018** Commanders course – leadership, order and management.

**2013-2016** Graduate of "Tichon Hadash" High school in Tel Aviv.

## PROFILE

I'm highly motivated and looking for a full-time position to apply my current skills and learn new ones along the way.

My primary skills include a fast learning ability, high curiosity in understanding how things work, and thinking out-of-the-box in creative and innovative ways.
